

Procraft Aluminium 470 sc

A pretty little hull from the Gold Coast, with one of the best consoles in the business and a transom the writer likes very much because once again, it's a full height without the door.

This is probably a little bit smaller in overall volume than some of the other boats in this supplement, but having said that, it also will need less power than many, and that translates straight away to using less fuel which means it all costs less to go fishing! Got to get our priorities right here – and getting out there on the blue stuff is what it's all about. . . and the Procraft 470 is one of the better options to contemplate. The good news is that Procraft are big enough to buy well, but small enough to look after individual customer requirements.
